California, Berkeley, June 1973**

**CONTRIBUTIONS TO THE MODEL THEORY OF FINITE
STRUCTURES**

Ronald Fagin

I want to express my deeply-felt thanks to my thesis advisor, Professor Robert Vaught, for his warm encouragement and thoughtful guidance. I also thank the other members of my thesis committee: Professor William Craig, whose helpful suggestions increased readability and reduced ambiguity, and Professor Jack Silver. I want to express my gratitude to my good friend Larry Carter, not only for his excellent comments, but also for listening to me whenever I was excited about a new idea. I am grateful to Professors R.W. Robinson, Richard Karp, Robert Solovay, and Ralph McKenzie for helpful discussions.

I am happy to acknowledge my debt to Professor Donald Kreider, whose magic in the classroom first made mathematical logic fascinating for me, and to Professor Herbert Enderton, whose truly inspiring teaching turned me towards writing my thesis in logic.

Finally, I thank the National Science Foundation for their generous support.
